ABSTRACT

This report provides a demographic profile of fall 1993 supplemental vocational education students (SVES's) at Miami-Dade Community College, in Florida, or students enrolled in non-credit courses designed to upgrade job skills. The profile is based on registration forms completed by 7,584 SVES's and includes data on student age, ethnicity, gender, and residency for the college as a whole and for the North, Kendall, Wolfson, Medical Center, and Homestead campuses. Highlighted findings include the following: (1) campus-wide, SVES's accounted for 12% of the total enrollment; (2) 52% of the SVES's were at North Campus and 33% at Kendall; (3) the mean age of the SVES's was 37.6 years, compared to 26.1 for credit students and 33.2 for students pursuing vocational certificates; (4) 37% of the SVES's were over 40 years old, compared to 8% of credit students and 23% of vocational certificate students; (5) 32% were White non-Hispanic and 51% were male, while vocational certificate students were 35% Black non-Hispanic, and 60% female; (6) while only 28% of 14 to 20 year-old SVES's were male, 56% of those over 40 were male; (7) 50.7% of the Black SVES's were female, compared to 58% of Hispanics, and 40% of Whites; (8) North Campus enrolled 3,964 SVES's, representing 18% of its total enrollment, while Kendall enrolled 2,464 SVES's, 11% of its total; and (9) Wolfson Campus had 261 SVES's, 2% of its total, and Medical Center campus had 848 supplemental students, accounting for 18% of its total enrollment. CHARACTERISTICS OF SUPPLEMENTAL VOCATIONAL EDUCATION STUDENTS FALL TERM 1993

More than 7,500 Supplemental students enrolled at Miami-Dade this past Fall Term in non-credit courses designed to upgrade job skills. This report provides basic demographics on these students. The amount of information provided is limited, however, because Supplemental vocational education students complete a very brief non-credit registration form. Even this limited information reveals a profile that differs considerably from that of credit students and students pursuing vocational credit certificates (PSAV).

College-Wide Summary. Table 1 displays the basic information on campus, age, ethnicity, gender and residency for Supplemental students, compared to PSAV students and credit students. Note than when we sum the three categories of students for the Fall Term, the total enrollment is approximately 63,000, with Supplemental students 12% of this total. More than half (52%) of Supplemental students were at the North Campus, while a third were at Kendall.

Supplemental students show a mean age of 37.6 years, compared to 26.1 for credit students and 33.2 for PSAV. More than a third (37%) of the Supplemental students were over 40 years old, compared to 8% of credit students and 23% of PSAV students. Additionally, Supplemental students show the highest proportion of White non-Hispanics (32%) and males (51%) among the three comparison groups, while PSAV students show the highest proportion of Black non-Hispanics (35%) and females (60%).

Tables 2 and 3 present data for Supplemental students only, and show age by gender and ethnicity by gender. In general, the proportion of males increases as age increases. While only 28% of 14 to 20-year-olds were male, 56% of students over 40 years old were male. Within ethnic groups, Blacks were fairly evenly distributed at 50.7% female and 49.3% male, while Hispanics were 58% female and Whites were 60% male.

Campus Highlights. Details for individual campuses are given in Tables 4 through 15. Homestead is excluded because of the small number of Supplemental vocational students (47). North Campus had 3,964 Supplemental vocational students, which is 18% of their combined total of 21,413 Supplemental, PSAV, and credit students. Supplemental students were the oldest of the three groups, with a mean age of 37.3 years. The highest proportion of North Campus Supplemental students were Whites (35%) and males (69%), probably due to the activities at the Fire and Police academies on the North Campus. As was true college-wide, the proportion of males increases as age increase, so that 75% of students over 40 were males.

Kendall Campus had a combined enrollment of 23,136 credit, PSAV, and Supplemental students, with Supplemental students 11% of this total (2,464 students). The mean age of Supplemental students was 38.1 years, making them the oldest of the three groups. Supplemental students had a higher proportion of Whites (28%) than did credit students (23%), but not as high as PSAV students (31%). The majority of Kendall Campus Supplemental students were Hispanic (64%) and female (70%).

Wolfson Campus had 261 Supplemental vocational students, which is 2% of their combined total of 12,764 Supplemental, PSAV, and credit students. These students were primarily Hispanic (87%) and female (77%), with the oldest mean age of any campus (38.7 years). The highest proportion of males (30.7%) occurred for supplemental students over 40 years old.

Medical Center Campus had a combined enrollment of 4,613 Supplemental, PSAV, and credit students, with Supplemental students 18% of this total (848 students). The mean age of Supplemental students was 37.5 years, compared to 30 years old for the other two groups. Supplemental students had the highest proportion of Whites (33%) and males (38%), while PSAV students had the lowest.

Technical note. Information on Supplemental vocational students was captured from course records on the Student Data Base (SDB). All supplemental course records were selected and unduplicated by student ID number. Campus was determined by the course location code. Demographics came from the SDB demographic record. Information on PSAV and credit students was captured from the IRS40 research file. It was possible that students could fall into more than one category.
